A Preface

This is the complete formalism demonstrating the *marked lambda calculus*, a judgmental framework for precise bidirectional error localization and recovery that employs gradual typing.

A.1 Organization

Though more is said in each individual section, the overall structure of the document is as follows:

- Section **B** employs the framework on a gradually typed lambda calculus.
- Section **C** extends the demonstration with patterned let expressions.
- Section **D** extends the demonstration with System F-style parametric polymorphism.
- Section **E** gives a version of the Hazelnut structure editor calculus that uses the marked lambda calculus to solve Hazelnut’s deficiency with regards to non-local hole fixes.
- Section **F** is similar, except that it employs the marking procedure in a roughly incremental fashion.
- Section **G** additionally gives the rules for constraint generation in relation to the type hole inference work of Section 4.

Note that each of the sections following Section **B** build upon that same core language.

A.2 Mechanization

Not all parts of the formalism are mechanized in Agda. It is noted in each section whether or not the section has been mechanized and, if so, where to find the relevant definitions and theorems.

As possible, the names of judgments and rules that appear in the mechanization have been made to follow those in this formalism. Refer also to the mechanization’s README for more details.

B Marked lambda calculus

The *marked lambda calculus* is a judgmental framework for bidirectional type error localization and recovery. Here, we demonstrate it on a gradually typed lambda calculus with numbers, booleans, and product types, as described in Section 2.1 of the paper.

MECHANIZATION ○

- core.agda
- marking.agda

B.1 Syntax

Type	τ	$::=$	$? \mid \text{num} \mid \text{bool} \mid \tau \rightarrow \tau \mid \tau \times \tau$
UExp	e	$::=$	$x \mid \lambda x : \tau. e \mid e e \mid \text{let } x = e \text{ in } e \mid \underline{n} \mid e + e$ $\mid \text{tt} \mid \text{ff} \mid \text{if } e \text{ then } e \text{ else } e \mid (e, e) \mid \pi_1 e \mid \pi_2 e \mid \langle \rangle$
MExp	\check{e}	$::=$	$x \mid \lambda x : \tau. \check{e} \mid \check{e} \check{e} \mid \text{let } x = \check{e} \text{ in } \check{e} \mid \underline{n} \mid \check{e} + \check{e}$ $\mid \text{tt} \mid \text{ff} \mid \text{if } \check{e} \text{ then } \check{e} \text{ else } \check{e} \mid (\check{e}, \check{e}) \mid \pi_1 \check{e} \mid \pi_2 \check{e} \mid \langle \rangle$ $\mid \langle x \rangle_{\square} \mid \langle \check{e} \rangle_{\star}$ $\mid \langle \lambda x : \tau. \check{e} \rangle_{\star} \mid \langle \lambda x : \tau. \check{e} \rangle_{\star \rightarrow \star}^{\rightarrow} \mid \langle \check{e} \rangle_{\star \rightarrow \star}^{\rightarrow} \check{e}$ $\mid \langle \text{if } \check{e} \text{ then } \check{e} \text{ else } \check{e} \rangle_{\eta}$ $\mid \langle (\check{e}, \check{e}) \rangle_{\star}^{\rightarrow} \mid \pi_1 \langle \check{e} \rangle_{\star}^{\rightarrow} \mid \pi_2 \langle \check{e} \rangle_{\star}^{\rightarrow}$

B.2 Types

$\tau_1 \sim \tau_2$ τ_1 is consistent with τ_2

TCUNKNOWN1	TCUNKNOWN2	TCREFL	TCARR	TCPROD
$\frac{}{? \sim \tau}$	$\frac{}{\tau \sim ?}$	$\frac{}{\tau \sim \tau}$	$\frac{\tau_1 \sim \tau'_1 \quad \tau_2 \sim \tau'_2}{\tau_1 \rightarrow \tau_2 \sim \tau'_1 \rightarrow \tau'_2}$	$\frac{\tau_1 \sim \tau'_1 \quad \tau_2 \sim \tau'_2}{\tau_1 \times \tau_2 \sim \tau'_1 \times \tau'_2}$

$\tau \triangleright_{\rightarrow} \tau_1 \rightarrow \tau_2$ τ has matched arrow type $\tau_1 \rightarrow \tau_2$

TMAUNKNOWN	TMAARR
$\frac{}{? \triangleright_{\rightarrow} ? \rightarrow ?}$	$\frac{}{\tau_1 \rightarrow \tau_2 \triangleright_{\rightarrow} \tau_1 \rightarrow \tau_2}$

$\tau \triangleright_{\times} \tau_1 \times \tau_2$ τ has matched binary product type $\tau_1 \times \tau_2$

TMPUNKNOWN	TMPPROD
$\frac{}{? \triangleright_{\times} ? \times ?}$	$\frac{}{\tau_1 \times \tau_2 \triangleright_{\times} \tau_1 \times \tau_2}$

$\tau_1 \sqcap \tau_2$ is a *partial* metafunction $\text{Type} \times \text{Type} \rightarrow \text{Type}$ defined as follows:

$$\begin{aligned}
 ? \sqcap \tau &= \tau \\
 \tau \sqcap ? &= \tau \\
 \text{num} \sqcap \text{num} &= \text{num} \\
 \text{bool} \sqcap \text{bool} &= \text{bool} \\
 (\tau_1 \rightarrow \tau_2) \sqcap (\tau'_1 \rightarrow \tau'_2) &= (\tau_1 \sqcap \tau'_1) \rightarrow (\tau_2 \sqcap \tau'_2) \\
 (\tau_1 \times \tau_2) \sqcap (\tau'_1 \times \tau'_2) &= (\tau_1 \sqcap \tau'_1) \times (\tau_2 \sqcap \tau'_2)
 \end{aligned}$$

τ base τ is a base type

TBNUM
num base

TBBool
bool base

B.3 Unmarked expressions

$\Gamma \vdash e \Rightarrow \tau$ e synthesizes type τ

$\frac{\text{USHOLE}}{\Gamma \vdash () \Rightarrow ?}$	$\frac{\text{USVAR} \quad x : \tau \in \Gamma}{\Gamma \vdash x \Rightarrow \tau}$	$\frac{\text{USLAM}}{\Gamma \vdash \lambda x : \tau_1. e \Rightarrow \tau_1 \rightarrow \tau_2}$	$\frac{\text{USAP} \quad \Gamma \vdash e_1 \Rightarrow \tau \quad \tau \twoheadrightarrow \tau_1 \rightarrow \tau_2 \quad \Gamma \vdash e_2 \Leftarrow \tau_1}{\Gamma \vdash e_1 e_2 \Rightarrow \tau_2}$
$\frac{\text{USLET} \quad \Gamma \vdash e_1 \Rightarrow \tau_1 \quad \Gamma, x : \tau_1 \vdash e_2 \Rightarrow \tau_2}{\Gamma \vdash \text{let } x = e_1 \text{ in } e_2 \Rightarrow \tau_2}$		$\frac{\text{USNUM}}{\Gamma \vdash \underline{n} \Rightarrow \text{num}}$	$\frac{\text{USPLUS} \quad \Gamma \vdash e_1 \Leftarrow \text{num} \quad \Gamma \vdash e_2 \Leftarrow \text{num}}{\Gamma \vdash e_1 + e_2 \Rightarrow \text{num}}$
$\frac{\text{USTRUE}}{\Gamma \vdash \text{tt} \Rightarrow \text{bool}}$	$\frac{\text{USFALSE}}{\Gamma \vdash \text{ff} \Rightarrow \text{bool}}$	$\frac{\text{USIF} \quad \Gamma \vdash e_1 \Leftarrow \text{bool} \quad \Gamma \vdash e_2 \Rightarrow \tau_1 \quad \Gamma \vdash e_3 \Rightarrow \tau_2 \quad \tau_3 = \tau_1 \sqcap \tau_2}{\Gamma \vdash \text{if } e_1 \text{ then } e_2 \text{ else } e_3 \Rightarrow \tau_3}$	
$\frac{\text{USPAIR} \quad \Gamma \vdash e_1 \Rightarrow \tau_1 \quad \Gamma \vdash e_2 \Rightarrow \tau_2}{\Gamma \vdash (e_1, e_2) \Rightarrow \tau_1 \times \tau_2}$		$\frac{\text{USPROJL} \quad \Gamma \vdash e \Rightarrow \tau \quad \tau \twoheadrightarrow \tau_1 \times \tau_2}{\Gamma \vdash \pi_1 e \Rightarrow \tau_1}$	$\frac{\text{USPROJR} \quad \Gamma \vdash e \Rightarrow \tau \quad \tau \twoheadrightarrow \tau_1 \times \tau_2}{\Gamma \vdash \pi_2 e \Rightarrow \tau_2}$

$\Gamma \vdash e \Leftarrow \tau$ e analyzes against type τ

$\frac{\text{UALAM} \quad \tau_3 \twoheadrightarrow \tau_1 \rightarrow \tau_2 \quad \tau \sim \tau_1 \quad \Gamma, x : \tau \vdash e \Leftarrow \tau_2}{\Gamma \vdash \lambda x : \tau. e \Leftarrow \tau_3}$	$\frac{\text{UALET} \quad \Gamma \vdash e_1 \Rightarrow \tau_1 \quad \Gamma, x : \tau_1 \vdash e_2 \Leftarrow \tau_2}{\Gamma \vdash \text{let } x = e_1 \text{ in } e_2 \Leftarrow \tau_2}$
$\frac{\text{UAIIF} \quad \Gamma \vdash e_1 \Leftarrow \text{bool} \quad \Gamma \vdash e_1 \Leftarrow \tau \quad \Gamma \vdash e_2 \Leftarrow \tau}{\Gamma \vdash \text{if } e_1 \text{ then } e_2 \text{ else } e_3 \Leftarrow \tau}$	$\frac{\text{UAPAIR} \quad \tau \twoheadrightarrow \tau_1 \times \tau_2 \quad \Gamma \vdash e_1 \Leftarrow \tau_1 \quad \Gamma \vdash e_2 \Leftarrow \tau_2}{\Gamma \vdash (e_1, e_2) \Leftarrow \tau}$
$\frac{\text{UASUBSUME} \quad \Gamma \vdash e \Rightarrow \tau' \quad \tau \sim \tau' \quad e \text{ subsumable}}{\Gamma \vdash e \Leftarrow \tau}$	

e subsumable e is subsumable

$\frac{\text{USuHOLE}}{\text{() subsumable}}$	$\frac{\text{USuVAR}}{x \text{ subsumable}}$	$\frac{\text{USuAP}}{e_1 e_2 \text{ subsumable}}$	$\frac{\text{USuNUM}}{\underline{n} \text{ subsumable}}$	$\frac{\text{USuPLUS}}{e_1 + e_2 \text{ subsumable}}$
$\frac{\text{USuTRUE}}{\text{tt subsumable}}$	$\frac{\text{USuFALSE}}{\text{ff subsumable}}$	$\frac{\text{USuPROJL}}{\pi_1 e \text{ subsumable}}$	$\frac{\text{USuPROJR}}{\pi_2 e \text{ subsumable}}$	

B.4 Marking

B.6 Mark erasure

\check{e}^\square is a metafunction $\text{MExp} \rightarrow \text{UExp}$ defined as follows:

$$\begin{aligned}
\llbracket \cdot \rrbracket^\square &= \llbracket \cdot \rrbracket \\
x^\square &= x \\
\llbracket x \rrbracket^\square &= x \\
(\lambda x : \tau. \check{e})^\square &= \lambda x : \tau. (\check{e}^\square) \\
\llbracket \lambda x : \tau. \check{e} \rrbracket^\square &= \lambda x : \tau. (\check{e}^\square) \\
\llbracket \lambda x : \tau. \check{e} \rrbracket_{\rightarrow}^\square &= \lambda x : \tau. (\check{e}^\square) \\
(\check{e}_1 \check{e}_2)^\square &= (\check{e}_1^\square) (\check{e}_2^\square) \\
\llbracket (\check{e}_1)_{\rightarrow} \rrbracket_{\rightarrow}^\square \check{e}_2^\square &= (\check{e}_1^\square) (\check{e}_2^\square) \\
(\text{let } x = \check{e}_1 \text{ in } \check{e}_2)^\square &= \text{let } x = (\check{e}_1^\square) \text{ in } (\check{e}_2^\square) \\
\check{n}^\square &= \check{n} \\
(\check{e}_1 + \check{e}_2)^\square &= (\check{e}_1^\square) + (\check{e}_2^\square) \\
\text{tt}^\square &= \text{tt} \\
\text{ff}^\square &= \text{ff} \\
(\text{if } \check{e}_1 \text{ then } \check{e}_2 \text{ else } \check{e}_3)^\square &= \text{if } (\check{e}_1^\square) \text{ then } (\check{e}_2^\square) \text{ else } (\check{e}_3^\square) \\
\llbracket \text{if } \check{e}_1 \text{ then } \check{e}_2 \text{ else } \check{e}_3 \rrbracket_{\text{if}}^\square &= \text{if } (\check{e}_1^\square) \text{ then } (\check{e}_2^\square) \text{ else } (\check{e}_3^\square) \\
(\check{e}_1, \check{e}_2)^\square &= (\check{e}_1^\square, \check{e}_2^\square) \\
\llbracket (\check{e}_1, \check{e}_2) \rrbracket_{\rightarrow}^\square &= (\check{e}_1^\square, \check{e}_2^\square) \\
(\pi_1 \check{e})^\square &= \pi_1(\check{e}^\square) \\
(\pi_1 \llbracket \check{e} \rrbracket_{\rightarrow}^\square)^\square &= \pi_1(\check{e}^\square) \\
(\pi_2 \check{e})^\square &= \pi_2(\check{e}^\square) \\
(\pi_2 \llbracket \check{e} \rrbracket_{\rightarrow}^\square)^\square &= \pi_2(\check{e}^\square) \\
\llbracket \check{e} \rrbracket_{\rightarrow}^\square &= \check{e}^\square
\end{aligned}$$

B.7 Metatheorems

Theorem B.1 (Marking Totality).

1. For all Γ and e , there exist \check{e} and τ such that $\Gamma \vdash e \rightarrow \check{e} \Rightarrow \tau$.
2. For all Γ , e , and τ , there exists \check{e} such that $\Gamma \vdash e \rightarrow \check{e} \Leftarrow \tau$.

Theorem B.2 (Marking Well-Formedness).

1. If $\Gamma \vdash e \rightarrow \check{e} \Rightarrow \tau$, then $\Gamma \Vdash \check{e} \Rightarrow \tau$ and $\check{e}^\square = e$.
2. If $\Gamma \vdash e \rightarrow \check{e} \Leftarrow \tau$, then $\Gamma \Vdash \check{e} \Leftarrow \tau$ and $\check{e}^\square = e$.

Theorem B.3 (Marking of Well-Typed/Ill-Typed Expressions).

1. (a) If $\Gamma \Vdash e \Rightarrow \tau$ and $\Gamma \vdash e \rightarrow \check{e} \Rightarrow \tau$, then \check{e} markless.
(b) If $\Gamma \Vdash e \Leftarrow \tau$ and $\Gamma \vdash e \rightarrow \check{e} \Leftarrow \tau$, then \check{e} markless.
2. (a) If there does not exist τ such that $\Gamma \Vdash e \Rightarrow \tau$, then for all \check{e} and τ' such that $\Gamma \vdash e \rightarrow \check{e} \Rightarrow \tau'$, it is not the case that \check{e} markless.
(b) If there does not exist τ such that $\Gamma \Vdash e \Leftarrow \tau$, then for all \check{e} and τ' such that $\Gamma \vdash e \rightarrow \check{e} \Leftarrow \tau'$, it is not the case that \check{e} markless.

Theorem B.4 (Marking Unicity).

1. If $\Gamma \vdash e \rightarrow \check{e}_1 \Rightarrow \tau_1$ and $\Gamma \vdash e \rightarrow \check{e}_2 \Rightarrow \tau_2$, then $\check{e}_1 = \check{e}_2$ and $\tau_1 = \tau_2$.
2. If $\Gamma \vdash e \rightarrow \check{e}_1 \Leftarrow \tau$ and $\Gamma \vdash e \rightarrow \check{e}_2 \Leftarrow \tau$, then $\check{e}_1 = \check{e}_2$.

B.8 Alternative conditional rules

There are alternative ways to formulate error localization in conditionals. Below, we provide two alternatives to the rules above.

B.8.1 Localize to second

In this formulation, we always select the first branch as “correct” and localize errors to the second.

$\boxed{\Gamma \vdash_{\mathcal{U}} e \Rightarrow \tau}$ e synthesizes type τ

$$\text{USIf}' \frac{\Gamma \vdash_{\mathcal{U}} e_1 \Leftarrow \text{bool} \quad \Gamma \vdash_{\mathcal{U}} e_2 \Rightarrow \tau \quad \Gamma \vdash_{\mathcal{U}} e_3 \Leftarrow \tau}{\Gamma \vdash_{\mathcal{U}} \text{if } e_1 \text{ then } e_2 \text{ else } e_3 \Rightarrow \tau}$$

$\boxed{\Gamma \vdash e \rightarrow \check{e} \Rightarrow \tau}$ e is marked into \check{e} and synthesizes type τ

$$\text{MKSIIf}' \frac{\Gamma \vdash e_1 \rightarrow \check{e}_1 \Leftarrow \text{bool} \quad \Gamma \vdash e_2 \rightarrow \check{e}_2 \Rightarrow \tau \quad \Gamma \vdash e_3 \rightarrow \check{e}_3 \Leftarrow \tau}{\Gamma \vdash \text{if } e_1 \text{ then } e_2 \text{ else } e_3 \rightarrow \text{if } \check{e}_1 \text{ then } \check{e}_2 \text{ else } \check{e}_3 \Rightarrow \tau}$$

$\boxed{\Gamma \vdash_{\mathcal{M}} \check{e} \Rightarrow \tau}$ \check{e} synthesizes type τ

$$\text{MSIf}' \frac{\Gamma \vdash_{\mathcal{M}} \check{e}_1 \Leftarrow \text{bool} \quad \Gamma \vdash_{\mathcal{M}} \check{e}_2 \Rightarrow \tau \quad \Gamma \vdash_{\mathcal{M}} \check{e}_3 \Leftarrow \tau}{\Gamma \vdash_{\mathcal{M}} \text{if } \check{e}_1 \text{ then } \check{e}_2 \text{ else } \check{e}_3 \Rightarrow \tau}$$

B.8.2 Localize to first

In this formulation, we always select the second branch as “correct” and localize errors to the first.

$\boxed{\Gamma \vdash_{\mathcal{U}} e \Rightarrow \tau}$ e synthesizes type τ

$$\text{USIf}'' \frac{\Gamma \vdash_{\mathcal{U}} e_1 \Leftarrow \text{bool} \quad \Gamma \vdash_{\mathcal{U}} e_3 \Rightarrow \tau \quad \Gamma \vdash_{\mathcal{U}} e_2 \Leftarrow \tau}{\Gamma \vdash_{\mathcal{U}} \text{if } e_1 \text{ then } e_2 \text{ else } e_3 \Rightarrow \tau}$$

$\boxed{\Gamma \vdash e \rightarrow \check{e} \Rightarrow \tau}$ e is marked into \check{e} and synthesizes type τ

$$\text{MKSIIf}'' \frac{\Gamma \vdash e_1 \rightarrow \check{e}_1 \Leftarrow \text{bool} \quad \Gamma \vdash e_3 \rightarrow \check{e}_3 \Rightarrow \tau \quad \Gamma \vdash e_2 \rightarrow \check{e}_2 \Leftarrow \tau}{\Gamma \vdash \text{if } e_1 \text{ then } e_2 \text{ else } e_3 \rightarrow \text{if } \check{e}_1 \text{ then } \check{e}_2 \text{ else } \check{e}_3 \Rightarrow \tau}$$

$\boxed{\Gamma \vdash_{\mathcal{M}} \check{e} \Rightarrow \tau}$ \check{e} synthesizes type τ

$$\text{MSIf}'' \frac{\Gamma \vdash_{\mathcal{M}} \check{e}_1 \Leftarrow \text{bool} \quad \Gamma \vdash_{\mathcal{M}} \check{e}_3 \Rightarrow \tau \quad \Gamma \vdash_{\mathcal{M}} \check{e}_2 \Leftarrow \tau}{\Gamma \vdash_{\mathcal{M}} \text{if } \check{e}_1 \text{ then } \check{e}_2 \text{ else } \check{e}_3 \Rightarrow \tau}$$

C Extension: patterned let expressions

In this section, we describe an extension of the marked lambda calculus for destructuring let expressions, as described in Section 2.3 of the paper.

MECHANIZATION \times

C.1 Syntax

Type	τ	$::=$	$\dots \mid ?^\Rightarrow$
UExp	e	$::=$	$\dots \mid \text{let } p = e \text{ in } e$
MExp	\check{e}	$::=$	$\dots \mid \text{let } p = \check{e} \text{ in } \check{e}$
UPat	p	$::=$	$_ \mid x \mid (p, p) \mid p : \tau$
MPat	\check{p}	$::=$	$_ \mid x \mid (\check{p}, \check{p}) \mid \check{p} : \tau$ $\mid (\check{p})_+ \mid ((\check{p}, \check{p}))_{\check{\tau}_+}$

C.2 Types

$\boxed{\tau_1 \sim \tau_2}$ τ_1 is consistent with τ_2

$$\frac{\text{TCUNKNOWN SWITCH1}}{?^\Rightarrow \sim \tau}$$

$$\frac{\text{TCUNKNOWN SWITCH2}}{\tau \sim ?^\Rightarrow}$$

$\boxed{\tau \triangleright_{\rightarrow} \tau_1 \rightarrow \tau_2}$ τ has matched arrow type $\tau_1 \rightarrow \tau_2$

$$\frac{\text{TMAUNKNOWN SWITCH}}{?^\Rightarrow \triangleright_{\rightarrow} ?^\Rightarrow \rightarrow ?^\Rightarrow}$$

$\boxed{\tau \triangleright_{\times} \tau_1 \times \tau_2}$ τ has matched binary product type $\tau_1 \times \tau_2$

$$\frac{\text{TMPUNKNOWN SWITCH}}{?^\Rightarrow \triangleright_{\times} ?^\Rightarrow \times ?^\Rightarrow}$$

$\boxed{\tau_1 \sqcap \tau_2}$ is a *partial* metafunction $\text{Type} \times \text{Type} \rightarrow \text{Type}$ defined as follows:

$$\begin{array}{rcl} & \vdots & \\ ?^\Rightarrow \sqcap \tau & = & ?^\Rightarrow \\ \tau \sqcap ?^\Rightarrow & = & ?^\Rightarrow \end{array}$$

C.3 Unmarked patterns

$\boxed{\Gamma \vdash_{\text{U}} p \Rightarrow \tau}$ p synthesizes type τ

$$\frac{\text{USPWILD}}{\Gamma \vdash_{\text{U}} _ \Rightarrow ?^\Rightarrow}$$

$$\frac{\text{USPVAR}}{\Gamma \vdash_{\text{U}} x \Rightarrow ?^\Rightarrow}$$

$$\frac{\text{USPPAIR} \quad \Gamma \vdash_{\text{U}} p_1 \Rightarrow \tau_1 \quad \Gamma \vdash_{\text{U}} p_2 \Rightarrow \tau_2}{\Gamma \vdash_{\text{U}} (p_1, p_2) \Rightarrow \tau_1 \times \tau_2}$$

$$\frac{\text{USPANNN} \quad \Gamma \vdash_{\text{U}} p \Leftarrow \tau \dashv \Gamma'}{\Gamma \vdash_{\text{U}} p : \tau \Rightarrow \tau}$$

$\boxed{\Gamma_1 \vdash_{\overline{\tau}} p \Leftarrow \tau \dashv \Gamma_2}$ p analyzes against type τ producing context Γ_2

$$\begin{array}{c}
\text{UAPWILD} \quad \frac{}{\Gamma \vdash_{\overline{\tau}} _ \Leftarrow \tau \dashv \Gamma} \quad \text{UAPVAR} \quad \frac{}{\Gamma \vdash_{\overline{\tau}} x \Leftarrow \tau \dashv \Gamma, x : \tau} \quad \text{UAPPAIR} \quad \frac{\tau \triangleright_{\times} \tau_1 \times \tau_2 \quad \Gamma \vdash_{\overline{\tau}} p_1 \Leftarrow \tau_1 \dashv \Gamma_1 \quad \Gamma_1 \vdash_{\overline{\tau}} p_2 \Leftarrow \tau_2 \dashv \Gamma_2}{\Gamma \vdash_{\overline{\tau}} (p_1, p_2) \Leftarrow \tau \dashv \Gamma_2} \\
\\
\text{UAPANN} \quad \frac{\Gamma \vdash_{\overline{\tau}} p \Leftarrow \tau' \dashv \Gamma' \quad \tau \sim \tau'}{\Gamma \vdash_{\overline{\tau}} p : \tau' \Leftarrow \tau \dashv \Gamma'}
\end{array}$$

C.4 Pattern marking

$\boxed{\Gamma \vdash p \rightsquigarrow \check{p} \Rightarrow \tau}$ p is marked into \check{p} and synthesizes τ

$$\begin{array}{c}
\text{MKSPWILD} \quad \frac{}{\Gamma \vdash _ \rightsquigarrow _ \Rightarrow ?} \quad \text{MKSPVAR} \quad \frac{}{\Gamma \vdash x \rightsquigarrow x \Rightarrow ?} \quad \text{MKSPPAIR} \quad \frac{\Gamma \vdash p_1 \rightsquigarrow \check{p}_1 \Rightarrow \tau_1 \quad \Gamma \vdash p_2 \rightsquigarrow \check{p}_2 \Rightarrow \tau_2}{\Gamma \vdash (p_1, p_2) \rightsquigarrow (\check{p}_1, \check{p}_2) \Rightarrow \tau_1 \times \tau_2} \\
\\
\text{MKSPANNN1} \quad \frac{\Gamma \vdash_{\overline{\tau}} p \Leftarrow \tau \dashv \Gamma' \quad \Gamma \vdash p \rightsquigarrow \check{p} \Leftarrow \tau \dashv \Gamma''}{\Gamma \vdash p : \tau \rightsquigarrow \check{p} : \tau \Rightarrow \tau} \quad \text{MKSPANNN2} \quad \frac{\Gamma \vdash_{\overline{\tau}} p \Leftarrow \tau \dashv \Gamma' \quad \Gamma \vdash p \rightsquigarrow \check{p} \Leftarrow ? \dashv \Gamma''}{\Gamma \vdash p : \tau \rightsquigarrow (\check{p})_{\tau} : \tau \Rightarrow \tau}
\end{array}$$

$\boxed{\Gamma_1 \vdash p \rightsquigarrow \check{p} \Leftarrow \tau \dashv \Gamma_2}$ p is marked into \check{p} and analyzes against τ producing Γ_2

$$\begin{array}{c}
\text{MKAPWILD} \quad \frac{}{\Gamma \vdash _ \rightsquigarrow _ \Leftarrow \tau \dashv \Gamma} \quad \text{MKAPVAR} \quad \frac{}{\Gamma \vdash x \rightsquigarrow x \Leftarrow \tau \dashv \Gamma, x : \tau} \quad \text{MKAPPAIR1} \quad \frac{\tau \triangleright_{\times} \tau_1 \times \tau_2 \quad \Gamma \vdash p_1 \rightsquigarrow \check{p}_1 \Leftarrow \tau_1 \dashv \Gamma_1 \quad \Gamma_1 \vdash p_2 \rightsquigarrow \check{p}_2 \Leftarrow \tau_2 \dashv \Gamma_2}{\Gamma \vdash (p_1, p_2) \rightsquigarrow (\check{p}_1, \check{p}_2) \Leftarrow \tau \dashv \Gamma_2} \\
\\
\text{MKAPPAIR2} \quad \frac{\tau \triangleright_{\times} \quad \Gamma \vdash p_1 \rightsquigarrow \check{p}_1 \Leftarrow ? \dashv \Gamma_1 \quad \Gamma_1 \vdash p_2 \rightsquigarrow \check{p}_2 \Leftarrow ? \dashv \Gamma_2}{\Gamma \vdash (p_1, p_2) \rightsquigarrow ((\check{p}_1, \check{p}_2))_{\tau_{\times}} \Leftarrow \tau \dashv \Gamma_2} \quad \text{MKAPANNN1} \quad \frac{\tau \sim \tau' \quad \Gamma \vdash p \rightsquigarrow \check{p} \Leftarrow \tau' \dashv \Gamma'}{\Gamma \vdash p : \tau' \rightsquigarrow \check{p} : \tau' \Leftarrow \tau \dashv \Gamma'} \quad \text{MKAPANNN2} \quad \frac{\tau \neq \tau' \quad \Gamma \vdash p \rightsquigarrow \check{p} \Leftarrow \tau' \dashv \Gamma'}{\Gamma \vdash p : \tau' \rightsquigarrow (\check{p} : \tau')_{\tau} \Leftarrow \tau \dashv \Gamma'}
\end{array}$$

C.5 Marked patterns

$\boxed{\Gamma \vdash_{\overline{\tau}} \check{p} \Rightarrow \tau}$ \check{p} synthesizes type τ

$$\begin{array}{c}
\text{MSPWILD} \quad \frac{}{\Gamma \vdash_{\overline{\tau}} _ \Rightarrow ?} \quad \text{MSPVAR} \quad \frac{}{\Gamma \vdash_{\overline{\tau}} x \Rightarrow ?} \quad \text{MSPPAIR} \quad \frac{\Gamma \vdash_{\overline{\tau}} \check{p}_1 \Rightarrow \tau_1 \quad \Gamma \vdash_{\overline{\tau}} \check{p}_2 \Rightarrow \tau_2}{\Gamma \vdash_{\overline{\tau}} (\check{p}_1, \check{p}_2) \Rightarrow \tau_1 \times \tau_2} \quad \text{MSPANNN} \quad \frac{\Gamma \vdash_{\overline{\tau}} \check{p} \Leftarrow \tau \dashv \Gamma'}{\Gamma \vdash_{\overline{\tau}} \check{p} : \tau \Rightarrow \tau}
\end{array}$$

$\boxed{\Gamma_1 \vdash_{\overline{M}} \check{p} \Leftarrow \tau \dashv \Gamma_2}$ \check{p} analyzes against type τ producing context Γ_2

$$\begin{array}{c}
\text{MAPWILD} \\
\hline

\begin{array}{c}
\text{UALetPat} \\
\Gamma \vdash_{\overline{U}} e_1 \Rightarrow \tau_1 \quad \Gamma \vdash_{\overline{U}} p \Leftarrow \tau_1 \dashv \Gamma' \quad \Gamma' \vdash_{\overline{U}} e_2 \Leftarrow \tau_2 \\
\hline
\Gamma \vdash_{\overline{U}} \text{let } p = e_1 \text{ in } e_2 \Leftarrow \tau_2
\end{array}$$

$\boxed{e \text{ subsumable}}$ e is subsumable

$$\begin{array}{c}
\text{USuLET PAT} \\
\hline
\text{let } p = e_1 \text{ in } e_2 \text{ subsumable}
\end{array}$$

C.8 Marking

$\boxed{\Gamma \vdash e \rightarrow \check{e} \Rightarrow \tau}$ e is marked into \check{e} and synthesizes type τ

$$\text{MKSLETPAT} \frac{\Gamma \vdash p \rightarrow \check{p} \Rightarrow \tau_p \quad \Gamma \vdash e_1 \rightarrow \check{e}_1 \Leftarrow \tau_p \quad \Gamma \Vdash e_1 \Rightarrow \tau_1 \quad \Gamma \Vdash p \Leftarrow \tau_1 \dashv \Gamma' \quad \Gamma' \vdash e_2 \rightarrow \check{e}_2 \Rightarrow \tau_2}{\Gamma \vdash \text{let } p = e_1 \text{ in } e_2 \rightarrow \check{p} = \check{e}_1 \text{ in } \check{e}_2 \Rightarrow \tau_2}$$

$\boxed{\Gamma \vdash e \rightarrow \check{e} \Leftarrow \tau}$ e is marked into \check{e} and analyzes against type τ

$$\text{MKALETPAT} \frac{\Gamma \vdash p \rightarrow \check{p} \Rightarrow \tau_p \quad \Gamma \vdash e_1 \rightarrow \check{e}_1 \Leftarrow \tau_p \quad \Gamma \Vdash e_1 \Rightarrow \tau_1 \quad \Gamma \Vdash p \Leftarrow \tau_1 \dashv \Gamma' \quad \Gamma' \vdash e_2 \rightarrow \check{e}_2 \Leftarrow \tau_2}{\Gamma \vdash \text{let } p = e_1 \text{ in } e_2 \rightarrow \check{p} = \check{e}_1 \text{ in } \check{e}_2 \Leftarrow \tau_2}$$

C.9 Marked expressions

$\boxed{\Gamma \Vdash \check{e} \Rightarrow \tau}$ \check{e} synthesizes type τ

$$\text{MSLETPAT} \frac{\Gamma \Vdash \check{p} \Rightarrow \tau_p \quad \Gamma \Vdash \check{e}_1 \Leftarrow \tau_p \quad \Gamma \Vdash \check{e}_1 \Rightarrow \tau_1 \quad \Gamma \Vdash \check{p} \Leftarrow \tau_1 \dashv \Gamma' \quad \Gamma' \Vdash \check{e}_2 \Rightarrow \tau_2}{\Gamma \Vdash \text{let } \check{p} = \check{e}_1 \text{ in } \check{e}_2 \Rightarrow \tau_2}$$

$\boxed{\Gamma \Vdash \check{e} \Leftarrow \tau}$ \check{e} analyzes against type τ

$$\text{MALETPAT} \frac{\Gamma \Vdash \check{p} \Rightarrow \tau_p \quad \Gamma \Vdash \check{e}_1 \Leftarrow \tau_p \quad \Gamma \Vdash \check{e}_1 \Rightarrow \tau_1 \quad \Gamma \Vdash \check{p} \Leftarrow \tau_1 \dashv \Gamma' \quad \Gamma' \Vdash \check{e}_2 \Leftarrow \tau_2}{\Gamma \Vdash \text{let } \check{p} = \check{e}_1 \text{ in } \check{e}_2 \Leftarrow \tau_2}$$

$\boxed{\check{e} \text{ subsumable}}$ \check{e} is subsumable

$$\text{MSuLETPAT} \frac{}{\text{let } p = \check{e}_1 \text{ in } \check{e}_2 \text{ subsumable}}$$

$\boxed{\check{e} \text{ markless}}$ \check{e} has no marks

$$\text{MLLETPAT} \frac{\check{p} \text{ markless} \quad \check{e}_1 \text{ markless} \quad \check{e}_2 \text{ markless}}{\text{let } \check{p} = \check{e}_1 \text{ in } \check{e}_2 \text{ markless}}$$

C.10 Mark erasure

$\boxed{\check{e}^\square}$ is a metafunction $\text{MExp} \rightarrow \text{UExp}$ defined as follows:

$$\begin{aligned} & \vdots \\ (\text{let } \check{p} = \check{e}_1 \text{ in } \check{e}_2)^\square &= \text{let } (\check{p}^\square) = (\check{e}_1^\square) \text{ in } (\check{e}_2^\square) \end{aligned}$$

C.11 Metatheorems

In addition to the original metatheorems above (see Section B.7), the following ones governing patterns additionally hold.

Theorem C.1 (Pattern Marking Totality).

1. For all Γ and p , there exist \check{p} and τ such that $\Gamma \vdash p \rightsquigarrow \check{p} \Rightarrow \tau$.
2. For all Γ , p , and τ , there exists \check{p} and Γ' such that $\Gamma \vdash p \rightsquigarrow \check{p} \Leftarrow \tau \dashv \Gamma'$.

Theorem C.2 (Pattern Marking Well-Formedness).

1. If $\Gamma \vdash p \rightsquigarrow \check{p} \Rightarrow \tau$, then $\Gamma \vdash_{\overline{M}} \check{p} \Rightarrow \tau$ and $\check{p}^\square = p$.
2. If $\Gamma \vdash p \rightsquigarrow \check{p} \Leftarrow \tau \dashv \Gamma'$, then $\Gamma \vdash_{\overline{M}} \check{p} \Leftarrow \tau \dashv \Gamma'$ and $\check{p}^\square = p$.

Theorem C.3 (Pattern Marking of Well-Typed/Ill-Typed Patterns).

1. (a) If $\Gamma \vdash_{\overline{U}} p \Rightarrow \tau$ and $\Gamma \vdash p \rightsquigarrow \check{p} \Rightarrow \tau$, then \check{p} markless.
 (b) If $\Gamma \vdash_{\overline{U}} p \Leftarrow \tau \dashv \Gamma'$ and $\Gamma \vdash p \rightsquigarrow \check{p} \Leftarrow \tau \dashv \Gamma'$, then \check{p} markless.
2. (a) If there does not exist τ such that $\Gamma \vdash_{\overline{U}} p \Rightarrow \tau$, then for all \check{p} and τ' such that $\Gamma \vdash p \rightsquigarrow \check{p} \Rightarrow \tau'$, it is not the case that \check{p} markless.
 (b) If there does not exist τ and Γ' such that $\Gamma \vdash_{\overline{U}} p \Leftarrow \tau \dashv \Gamma'$, then for all \check{p} , τ' , and Γ' such that $\Gamma \vdash p \rightsquigarrow \check{p} \Leftarrow \tau' \dashv \Gamma'$, it is not the case that \check{p} markless.

Theorem C.4 (Pattern Marking Unicity).

1. If $\Gamma \vdash p \rightsquigarrow \check{p}_1 \Rightarrow \tau_1$ and $\Gamma \vdash p \rightsquigarrow \check{p}_2 \Rightarrow \tau_2$, then $\check{p}_1 = \check{p}_2$ and $\tau_1 = \tau_2$.
2. If $\Gamma \vdash p \rightsquigarrow \check{p}_1 \Leftarrow \tau \dashv \Gamma_1$ and $\Gamma \vdash p \rightsquigarrow \check{p}_2 \Leftarrow \tau \dashv \Gamma_2$, then $\check{p}_1 = \check{p}_2$ and $\Gamma_1 = \Gamma_2$.

D Extension: System F-style polymorphism

In this section, we describe an extension of the marked lambda calculus for System F-style parametric polymorphism, as sketched out in Section 2.4 of the paper.

MECHANIZATION \times

D.1 Syntax

$$\begin{array}{ll}
 \text{Type } \tau & ::= \dots \mid \forall \alpha. \tau \mid \alpha \\
 \text{MType } \check{\tau} & ::= \dots \mid \forall \alpha. \check{\tau} \mid \alpha \mid \langle \alpha \rangle_{\square} \\
 \text{UExp } e & ::= \dots \mid \Lambda \alpha. e \mid e [\tau] \\
 \text{MExp } \check{e} & ::= \dots \mid \Lambda \alpha. \check{e} \mid \check{e} [\check{\tau}] \\
 & \quad \mid \langle \Lambda \alpha. \check{e} \rangle_{\check{\tau}} \mid \langle \check{e} \rangle_{\check{\tau}} [\check{\tau}]
 \end{array}$$

D.2 Unmarked types

$\boxed{\Sigma \vdash_{\check{\tau}} \tau_1 \sim \tau_2}$ τ_1 and τ_2 are consistent

$$\begin{array}{c}
 \dots \\
 \text{TCFORALL} \\
 \frac{\Sigma, \alpha \vdash_{\check{\tau}} \tau \sim \tau'}{\Sigma \vdash_{\check{\tau}} \forall \alpha. \tau \sim \forall \alpha. \tau'} \\
 \text{TCVAR} \\
 \frac{\alpha \in \Sigma}{\Sigma \vdash_{\check{\tau}} \alpha \sim \alpha}
 \end{array}$$

$\boxed{\Sigma \vdash_{\check{\tau}} \tau}$ τ is well-formed

$$\begin{array}{c}
 \text{TWFUNKNOWN} \quad \text{TWFNUM} \quad \text{TWFBOOL} \quad \text{TWFARR} \quad \text{TWFPROD} \quad \text{TWFforall} \\
 \frac{}{\Sigma \vdash_{\check{\tau}} ?} \quad \frac{}{\Sigma \vdash_{\check{\tau}} \text{num}} \quad \frac{}{\Sigma \vdash_{\check{\tau}} \text{bool}} \quad \frac{\Sigma \vdash_{\check{\tau}} \check{\tau}_1 \quad \Sigma \vdash_{\check{\tau}} \check{\tau}_2}{\Sigma \vdash_{\check{\tau}} \check{\tau}_1 \rightarrow \check{\tau}_2} \quad \frac{\Sigma \vdash_{\check{\tau}} \check{\tau}_1 \quad \Sigma \vdash_{\check{\tau}} \check{\tau}_2}{\Sigma \vdash_{\check{\tau}} \check{\tau}_1 \times \check{\tau}_2} \quad \frac{\Sigma, \alpha \vdash_{\check{\tau}} \check{\tau}}{\Sigma \vdash_{\check{\tau}} \forall \alpha. \check{\tau}} \\
 \text{TWFVAR} \\
 \frac{\alpha \in \Sigma}{\Sigma \vdash_{\check{\tau}} \alpha}
 \end{array}$$

$\boxed{\tau \triangleright_{\forall} \forall \alpha. \tau'}$ τ has matched forall type $\forall \alpha. \tau'$

$$\begin{array}{c}
 \text{TMFUNKNOWN} \quad \text{TMFforall} \\
 \frac{}{? \triangleright_{\forall} \forall \alpha. ?} \quad \frac{}{\forall \alpha. \tau \triangleright_{\forall} \forall \alpha. \tau}
 \end{array}$$

$\boxed{\tau_1 \sqcap \tau_2}$ is a *partial* metafunction $\text{Type} \times \text{Type} \rightarrow \text{Type}$ defined as follows:

$$\begin{array}{rcl}
 & \vdots & \\
 (\forall \alpha. \tau) \sqcap (\forall \alpha. \tau') & = & \forall \alpha. (\tau \sqcap \tau') \\
 \alpha \sqcap \alpha & = & \alpha
 \end{array}$$

$\boxed{\tau_1[\tau_2/\alpha]}$ is a metafunction $\text{Type} \times \text{Type} \times \text{TypeVar} \rightarrow \text{Type}$ defined as follows:

$$\begin{array}{rcl}
 ?[\tau/\alpha] & = & ? \\
 \text{num}[\tau/\alpha] & = & \text{num} \\
 \text{bool}[\tau/\alpha] & = & \text{bool} \\
 (\tau_1 \rightarrow \tau_2)[\tau/\alpha] & = & (\tau_1[\tau/\alpha]) \rightarrow (\tau_2[\tau/\alpha]) \\
 (\tau_1 \times \tau_2)[\tau/\alpha] & = & (\tau_1[\tau/\alpha]) \times (\tau_2[\tau/\alpha]) \\
 (\forall \alpha'. \tau')[\tau/\alpha] & = & \forall \alpha'. \tau' \quad \alpha = \alpha' \\
 (\forall \alpha'. \tau')[\tau/\alpha] & = & \forall \alpha'. (\tau'[\tau/\alpha]) \quad \alpha \neq \alpha' \\
 \alpha'[\tau/\alpha] & = & \tau \quad \alpha = \alpha' \\
 \alpha'[\tau/\alpha] & = & \alpha' \quad \alpha \neq \alpha'
 \end{array}$$

D.3 Type marking

$\boxed{\Sigma \vdash \tau \mapsto \check{\tau}}$ τ is marked into $\check{\tau}$

MKTUNKNOWN $\frac{}{\Sigma \vdash ? \mapsto ?}$	MKTNUM $\frac{}{\Sigma \vdash \text{num} \mapsto \text{num}}$	MKTBOOL $\frac{}{\Sigma \vdash \text{bool} \mapsto \text{bool}}$	MKTARR $\frac{\Sigma \vdash \tau_1 \mapsto \check{\tau}_1 \quad \Sigma \vdash \tau_2 \mapsto \check{\tau}_2}{\Sigma \vdash \tau_1 \rightarrow \tau_2 \mapsto \check{\tau}_1 \rightarrow \check{\tau}_2}$
MKTPROD $\frac{\Sigma \vdash \tau_1 \mapsto \check{\tau}_1 \quad \Sigma \vdash \tau_2 \mapsto \check{\tau}_2}{\Sigma \vdash \tau_1 \times \tau_2 \mapsto \check{\tau}_1 \times \check{\tau}_2}$	MKTforall $\frac{\Sigma, \alpha \vdash \tau \mapsto \check{\tau}}{\Sigma \vdash \forall \alpha. \tau \mapsto \forall \alpha. \check{\tau}}$	MKTvar $\frac{\alpha \in \Sigma}{\Sigma \vdash \alpha \mapsto \alpha}$	MKTfree $\frac{\alpha \notin \Sigma}{\Sigma \vdash \alpha \mapsto \langle \alpha \rangle_{\square}}$

D.4 Marked types

$\boxed{\Sigma \vdash_{\overline{M}} \check{\tau}_1 \sim \check{\tau}_2}$ $\check{\tau}_1$ and $\check{\tau}_2$ are consistent

...	MTCforall $\frac{\Sigma, \alpha \vdash_{\overline{M}} \check{\tau} \sim \check{\tau}'}{\Sigma \vdash_{\overline{M}} \forall \alpha. \check{\tau} \sim \forall \alpha. \check{\tau}'}$	MTCvar $\frac{\alpha \in \Sigma}{\Sigma \vdash_{\overline{M}} \alpha \sim \alpha}$	MTCfree1 $\frac{\alpha \notin \Sigma}{\Sigma \vdash_{\overline{M}} \langle \alpha \rangle_{\square} \sim \check{\tau}}$	MTCfree2 $\frac{\alpha \notin \Sigma}{\Sigma \vdash_{\overline{M}} \check{\tau} \sim \langle \alpha \rangle_{\square}}$
-----	---	--	---	---

$\boxed{\Sigma \vdash_{\overline{M}} \check{\tau}}$ $\check{\tau}$ is well-formed

MTWFUNKNOWN $\frac{}{\Sigma \vdash_{\overline{M}} ?}$	MTWFNUM $\frac{}{\Sigma \vdash_{\overline{M}} \text{num}}$	MTWFBOOL $\frac{}{\Sigma \vdash_{\overline{M}} \text{bool}}$	MTWFARR $\frac{\Sigma \vdash_{\overline{M}} \check{\tau}_1 \quad \Sigma \vdash_{\overline{M}} \check{\tau}_2}{\Sigma \vdash_{\overline{M}} \check{\tau}_1 \rightarrow \check{\tau}_2}$	MTWFPROD $\frac{\Sigma \vdash_{\overline{M}} \check{\tau}_1 \quad \Sigma \vdash_{\overline{M}} \check{\tau}_2}{\Sigma \vdash_{\overline{M}} \check{\tau}_1 \times \check{\tau}_2}$
	MTWFforall $\frac{\Sigma, \alpha \vdash_{\overline{M}} \check{\tau}}{\Sigma \vdash_{\overline{M}} \forall \alpha. \check{\tau}}$	MTWFvar $\frac{\alpha \in \Sigma}{\Sigma \vdash_{\overline{M}} \alpha}$	MTWFFree $\frac{\alpha \notin \Sigma}{\Sigma \vdash_{\overline{M}} \langle \alpha \rangle_{\square}}$	

$\boxed{\check{\tau} \triangleright_{\forall} \forall \alpha. \check{\tau}'}$ $\check{\tau}$ has matched forall type $\forall \alpha. \check{\tau}'$

MTMFUNKNOWN $\frac{}{? \triangleright_{\forall} \forall \alpha. ?}$	MTMFforall $\frac{}{\forall \alpha. \check{\tau} \triangleright_{\forall} \forall \alpha. \check{\tau}}$	MTMFFree $\frac{}{\langle \alpha \rangle_{\square} \triangleright_{\forall} \forall \alpha. ?}$
---	--	---

$\boxed{\check{\tau}_1 \sqcap \check{\tau}_2}$ is a *partial* metafunction $\text{MType} \times \text{MType} \rightarrow \text{MType}$ defined as follows:

$$\begin{aligned}
 & \vdots \\
 (\forall \alpha. \check{\tau}) \sqcap (\forall \alpha. \check{\tau}') &= \forall \alpha. (\check{\tau} \sqcap \check{\tau}') \\
 \alpha \sqcap \alpha &= \alpha \\
 \langle \alpha \rangle_{\square} \sqcap \check{\tau} &= \check{\tau} \\
 \check{\tau} \sqcap \langle \alpha \rangle_{\square} &= \check{\tau}
 \end{aligned}$$

$\check{t}_1[\check{t}_2/\alpha]$ is a metafunction $MType \times MType \times MTypeVar \rightarrow MType$ defined as follows:

$$\begin{aligned}
?[\check{t}/\alpha] &= ? \\
num[\check{t}/\alpha] &= num \\
bool[\check{t}/\alpha] &= bool \\
(\check{t}_1 \rightarrow \check{t}_2)[\check{t}/\alpha] &= (\check{t}_1[\check{t}/\alpha]) \rightarrow (\check{t}_2[\check{t}/\alpha]) \\
(\check{t}_1 \times \check{t}_2)[\check{t}/\alpha] &= (\check{t}_1[\check{t}/\alpha]) \times (\check{t}_2[\check{t}/\alpha]) \\
(\forall \alpha'. \check{t}')[\check{t}/\alpha] &= \forall \alpha'. \check{t}' & \alpha = \alpha' \\
(\forall \alpha'. \check{t}')[\check{t}/\alpha] &= \forall \alpha'. (\check{t}'[\check{t}/\alpha]) & \alpha \neq \alpha' \\
\alpha'[\check{t}/\alpha] &= \check{t} & \alpha = \alpha' \\
\alpha'[\check{t}/\alpha] &= \alpha' & \alpha \neq \alpha' \\
\langle \alpha' \rangle_{\square}[\check{t}/\alpha] &= \langle \alpha' \rangle_{\square}
\end{aligned}$$

\check{t} markless \check{t} has no marks

$$\begin{array}{c}
\text{MLTUNKNOWN} \\
\hline
? \text{ markless} \\
\\
\text{MLTPROD} \\
\check{t}_1 \text{ markless} \quad \check{t}_2 \text{ markless} \\
\hline
\check{t}_1 \times \check{t}_2 \text{ markless} \\
\\
\text{MLTNUM} \\
\hline
num \text{ markless} \\
\\
\text{MLTBOOL} \\
\hline
bool \text{ markless} \\
\\
\text{MLTARR} \\
\check{t}_1 \text{ markless} \quad \check{t}_2 \text{ markless} \\
\hline
\check{t}_1 \rightarrow \check{t}_2 \text{ markless} \\
\\
\text{MLTFORALL} \\
\check{t} \text{ markless} \\
\hline
\forall \alpha. \check{t} \text{ markless} \\
\\
\text{MLTVAR} \\
\hline
\alpha \text{ markless}
\end{array}$$

D.5 Type mark erasure

\check{t}^{\square} is a metafunction $MType \rightarrow Type$ defined as follows:

$$\begin{aligned}
?^{\square} &= ? \\
num^{\square} &= num \\
bool^{\square} &= bool \\
(\check{t}_1 \rightarrow \check{t}_2)^{\square} &= (\check{t}_1^{\square}) \rightarrow (\check{t}_2^{\square}) \\
(\check{t}_1 \times \check{t}_2)^{\square} &= (\check{t}_1^{\square}) \times (\check{t}_2^{\square}) \\
(\forall \alpha. \check{t})^{\square} &= \forall \alpha. (\check{t}^{\square}) \\
\alpha^{\square} &= \alpha \\
\langle \alpha \rangle_{\square}^{\square} &= \alpha
\end{aligned}$$

D.6 Unmarked expressions

$\Sigma; \Gamma \vdash_{\check{t}} e \Rightarrow \tau$ e synthesizes type τ

$$\begin{array}{c}
\text{USTYPELAM} \\

 \end{array}$$

$\boxed{\check{e} \text{ subsumable}}$ \check{e} is subsumable

$$\begin{array}{c}
 \dots \\
 \text{MSuTYPEAP1} \\
 \frac{}{\check{e} [\check{\tau}] \text{ subsumable}} \\
 \text{MSuTYPEAP2} \\
 \frac{}{(\check{e})_{\check{\tau}}^{\check{\tau}} [\check{\tau}] \text{ subsumable}}
 \end{array}$$

$\boxed{\check{e} \text{ markless}}$ \check{e} has no marks

$$\begin{array}{c}
 \dots \\
 \text{MLTYPELAM} \\
 \frac{\check{e} \text{ markless}}{\Lambda \alpha. \check{e} \text{ markless}} \\
 \text{MLTYPEAP} \\
 \frac{\check{e} \text{ markless} \quad \check{\tau} \text{ markless}}{\check{e} [\check{\tau}] \text{ markless}}
 \end{array}$$

D.9 Mark erasure

$\boxed{\check{e}^{\square}}$ is a metafunction $\text{MExp} \rightarrow \text{UExp}$ defined as follows:

$$\begin{array}{lcl}
 & \vdots & \\
 (\Lambda \alpha. \check{e})^{\square} & = & \Lambda \alpha. (\check{e}^{\square}) \\
 (\Lambda \alpha. \check{e})_{\check{\tau}}^{\check{\tau}}{}^{\square} & = & \Lambda \alpha. (\check{e}^{\square}) \\
 (\check{e} [\check{\tau}])^{\square} & = & \check{e}^{\square} [\check{\tau}^{\square}] \\
 ((\check{e})_{\check{\tau}}^{\check{\tau}} [\check{\tau}])^{\square} & = & \check{e}^{\square} [\check{\tau}^{\square}]
 \end{array}$$

D.10 Metatheorems

With polymorphism, we have the following modified metatheorems which additionally account for type well-formedness and marking.

Lemma D.1 (Unmarked Synthesis). *If $\Sigma; \Gamma \vdash_{\mathcal{U}} e \Rightarrow \tau$, then $\Sigma \vdash_{\mathcal{U}} \tau$.*

Lemma D.2 (Marked Synthesis). *If $\Sigma; \Gamma \vdash_{\mathcal{M}} \check{e} \Rightarrow \check{\tau}$, then $\Sigma \vdash_{\mathcal{M}} \check{\tau}$.*

Theorem D.3 (Marking Totality).

1. *For all Σ and τ , there exists $\check{\tau}$ such that $\Sigma \vdash \tau \rightsquigarrow \check{\tau}$.*
2. *For all Σ, Γ , and e , there exist \check{e} and $\check{\tau}$ such that $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e} \Rightarrow \check{\tau}$.*
3. *For all Σ, Γ, e , and $\check{\tau}$ such that $\Sigma \vdash_{\mathcal{M}} \check{\tau}$, there exists \check{e} such that $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e} \Leftarrow \check{\tau}$.*

Theorem D.4 (Marking Well-Formedness).

1. *If $\Sigma \vdash \tau \rightsquigarrow \check{\tau}$, then $\Sigma \vdash_{\mathcal{M}} \check{\tau}$ and $\check{\tau}^\square = \tau$.*
2. *If $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e} \Rightarrow \check{\tau}$, then $\Sigma \vdash_{\mathcal{M}} \check{\tau}$ and $\Sigma; \Gamma \vdash_{\mathcal{M}} \check{e} \Rightarrow \check{\tau}$ and $\check{e}^\square = e$.*
3. *If $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e} \Leftarrow \check{\tau}$ and $\Sigma \vdash_{\mathcal{M}} \check{\tau}$, then $\Sigma; \Gamma \vdash_{\mathcal{M}} \check{e} \Leftarrow \check{\tau}$ and $\check{e}^\square = e$.*

Theorem D.5 (Marking of Well-Typed/Ill-Typed Expressions).

1. (a) *If $\Sigma \vdash_{\mathcal{U}} \tau$ and $\Sigma \vdash \tau \rightsquigarrow \check{\tau}$, then $\check{\tau}$ markless.*
 (b) *If $\Sigma; \Gamma \vdash_{\mathcal{U}} e \Rightarrow \tau$ and $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e} \Rightarrow \check{\tau}$, then $\Sigma \vdash \tau \rightsquigarrow \check{\tau}$ and \check{e} markless.*
 (c) *If $\Sigma; \Gamma \vdash_{\mathcal{U}} e \Leftarrow \tau$ and $\Sigma \vdash \tau \rightsquigarrow \check{\tau}$ and $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e} \Leftarrow \check{\tau}$, then \check{e} markless.*
2. (a) *If it is not the case that $\Sigma \vdash_{\mathcal{U}} \tau$, then for all $\check{\tau}$ such that $\Sigma \vdash \tau \rightsquigarrow \check{\tau}$, it is not the case that $\check{\tau}$ markless.*
 (b) *If there does not exist τ such that $\Sigma; \Gamma \vdash_{\mathcal{U}} e \Rightarrow \tau$, then for all \check{e} and $\check{\tau}$ such that $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e} \Rightarrow \check{\tau}$, it is not the case that \check{e} markless.*
 (c) *If there does not exist τ such that $\Sigma; \Gamma \vdash_{\mathcal{U}} e \Leftarrow \tau$, then for all \check{e} and $\check{\tau}$ such that $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e} \Leftarrow \check{\tau}$, it is not the case that \check{e} markless.*

Theorem D.6 (Marking Unicity).

1. *If $\Sigma \vdash \tau \rightsquigarrow \check{\tau}_1$, and $\Sigma \vdash \tau \rightsquigarrow \check{\tau}_2$, then $\check{\tau}_1 = \check{\tau}_2$.*
2. *If $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e}_1 \Rightarrow \check{\tau}_1$ and $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e}_2 \Rightarrow \check{\tau}_2$, then $\check{e}_1 = \check{e}_2$ and $\check{\tau}_1 = \check{\tau}_2$.*
3. *If $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e}_1 \Leftarrow \check{\tau}$ and $\Sigma; \Gamma \vdash e \rightsquigarrow \check{e}_2 \Leftarrow \check{\tau}$, then $\check{e}_1 = \check{e}_2$.*

E Untyped hazelnut

In this section we describe an *untyped* version of the Hazelnut action calculus that might be layered with the marked lambda calculus to yield a structure editing calculus that supports non-local hole fixes. This is described in Section 3.2 of the paper.

MECHANIZATION ○

► hazelnut.agda

E.1 Syntax

$$\begin{array}{ll}
 \text{ZType } \underline{\tau} & ::= \text{ } \triangleright \underline{\tau} \triangleleft \mid \underline{\tau} \rightarrow \tau \mid \tau \rightarrow \underline{\tau} \mid \underline{\tau} \times \tau \mid \tau \times \underline{\tau} \\
 \text{ZExp } \underline{e} & ::= \text{ } \triangleright \underline{e} \triangleleft \mid \lambda x : \underline{\tau}. e \mid \lambda x : \tau. \underline{e} \mid \underline{e} \ e \mid e \ \underline{e} \\
 & \mid \text{let } x = \underline{e} \text{ in } e \mid \text{let } x = e \text{ in } \underline{e} \\
 & \mid \underline{e} + e \mid e + \underline{e} \\
 & \mid \text{if } \underline{e} \text{ then } e \text{ else } e \mid \text{if } e \text{ then } \underline{e} \text{ else } e \mid \text{if } e \text{ then } e \text{ else } \underline{e} \\
 & \mid (e, e) \mid (e, \underline{e}) \mid \pi_1 \underline{e} \mid \pi_2 \underline{e}
 \end{array}$$

E.2 Cursor erasure

E.2.1 Type cursor erasure

$\boxed{\underline{\tau}^\circ}$ is a metafunction $\text{ZType} \rightarrow \text{Type}$ defined as follows:

$$\begin{aligned}
 \triangleright \underline{\tau} \triangleleft^\circ &= \tau \\
 (\underline{\tau} \rightarrow \tau)^\circ &= (\underline{\tau}^\circ) \rightarrow \tau \\
 (\tau \rightarrow \underline{\tau})^\circ &= \tau \rightarrow (\underline{\tau}^\circ) \\
 (\underline{\tau} \times \tau)^\circ &= (\underline{\tau}^\circ) \times \tau \\
 (\tau \times \underline{\tau})^\circ &= \tau \times (\underline{\tau}^\circ)
 \end{aligned}$$

E.2.2 Expression cursor erasure

$\boxed{\underline{e}^\circ}$ is a metafunction $\text{ZExp} \rightarrow \text{UExp}$ defined as follows:

$$\begin{aligned}
 \triangleright \underline{e} \triangleleft^\circ &= e \\
 (\lambda x : \underline{\tau}. e)^\circ &= \lambda x : (\underline{\tau}^\circ). e \\
 (\lambda x : \tau. \underline{e})^\circ &= \lambda x : \tau. (\underline{e}^\circ) \\
 (\underline{e} \ e)^\circ &= (\underline{e}^\circ) \ e \\
 (e \ \underline{e})^\circ &= e \ (\underline{e}^\circ) \\
 (\text{let } x = \underline{e} \text{ in } e)^\circ &= \text{let } x = (\underline{e}^\circ) \text{ in } e \\
 (\text{let } x = e \text{ in } \underline{e})^\circ &= \text{let } x = e \text{ in } (\underline{e}^\circ) \\
 (\underline{e} + e)^\circ &= (\underline{e}^\circ) + e \\
 (e + \underline{e})^\circ &= e + (\underline{e}^\circ) \\
 (\text{if } \underline{e} \text{ then } e_1 \text{ else } e_2)^\circ &= \text{if } (\underline{e}^\circ) \text{ then } e_1 \text{ else } e_2 \\
 (\text{if } e_1 \text{ then } \underline{e} \text{ else } e_2)^\circ &= \text{if } e_1 \text{ then } (\underline{e}^\circ) \text{ else } e_2 \\
 (\text{if } e_1 \text{ then } e_2 \text{ else } \underline{e})^\circ &= \text{if } e_1 \text{ then } e_2 \text{ else } (\underline{e}^\circ) \\
 (\underline{e}, e)^\circ &= (\underline{e}^\circ, e) \\
 (e, \underline{e})^\circ &= (e, \underline{e}^\circ) \\
 (\pi_1 \underline{e})^\circ &= \pi_1 (\underline{e}^\circ) \\
 (\pi_2 \underline{e})^\circ &= \pi_2 (\underline{e}^\circ)
 \end{aligned}$$

E.3 Action model

Action	α	$::=$	move δ construct ψ del

\frac{\cdot}{\cdot \text{ movements}}$$

$$\text{AMICONS} \\
\frac{\bar{\alpha} \text{ movements}}{\text{move } \delta; \bar{\alpha} \text{ movements}}$$

E.4 Metatheorems

Theorem E.1 (Movement Erasure Invariance).

1. If $\underline{\tau} \xrightarrow{\text{move } \delta} \underline{\tau}'$, then $\underline{\tau}^\circ = \underline{\tau}'^\circ$.
2. If $\underline{e} \xrightarrow{\text{move } \delta} \underline{e}'$, then $\underline{e}^\circ = \underline{e}'^\circ$.

Theorem E.2 (Reachability).

1. If $\underline{\tau}^\circ = \underline{\tau}'^\circ$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\underline{\tau} \xrightarrow{\bar{\alpha}}^* \underline{\tau}'$.
2. If $\underline{e}^\circ = \underline{e}'^\circ$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\underline{e} \xrightarrow{\bar{\alpha}}^* \underline{e}'$.

Lemma E.2.1 (Reach Up).

1. If $\underline{\tau}^\circ = \tau$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\underline{\tau} \xrightarrow{\bar{\alpha}}^* \triangleright \tau \triangleleft$.
2. If $\underline{e}^\circ = e$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\underline{e} \xrightarrow{\bar{\alpha}}^* \triangleright e \triangleleft$.

Lemma E.2.2 (Reach Down).

1. If $\underline{\tau}^\circ = \tau$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\triangleright \tau \triangleleft \xrightarrow{\bar{\alpha}}^* \underline{\tau}$.
2. If $\underline{e}^\circ = e$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\triangleright e \triangleleft \xrightarrow{\bar{\alpha}}^* \underline{e}$.

Theorem E.3 (Constructability).

1. For every τ , there exists $\bar{\alpha}$ such that $\triangleright ? \triangleleft \xrightarrow{\bar{\alpha}}^* \triangleright \tau \triangleleft$.
2. For every e , there exists $\bar{\alpha}$ such that $\triangleright (\parallel) \triangleleft \xrightarrow{\bar{\alpha}}^* \triangleright e \triangleleft$.

Theorem E.4 (Determinism).

1. If $\underline{\tau} \xrightarrow{\alpha}^* \underline{\tau}'$ and $\underline{\tau} \xrightarrow{\alpha}^* \underline{\tau}''$, then $\underline{\tau}' = \underline{\tau}''$.
2. If $\underline{e} \xrightarrow{\alpha}^* \underline{e}'$ and $\underline{e} \xrightarrow{\alpha}^* \underline{e}''$, then $\underline{e}' = \underline{e}''$.

F Typed hazelnut

We now give a description of a *typed* version of the Hazelnut action calculus that incorporates the marked lambda calculus to solve the problem of non-local hole fixes. Here, unlike in the integration of the untyped version and the marked lambda calculus given in Section E, remarking is performed only when necessary instead of after every action. This system is sketched out in Section 3.2 of the paper.

MECHANIZATION ×

F.1 Syntax

Zippered types are the same as in the untyped model.

$$\begin{array}{lcl} \text{ZMExp } \underline{e} & ::= & \textcolor{green}{\triangleright \underline{e} \triangleleft} \mid \lambda x : \underline{\tau}. \underline{e} \mid \lambda x : \tau. \underline{e} \mid \underline{e} \underline{e} \mid \underline{e} \underline{e} \\ & & \text{let } x = \underline{e} \text{ in } \underline{e} \mid \text{let } x = \underline{e} \text{ in } \underline{e} \\ & & \underline{e} + \underline{e} \mid \underline{e} + \underline{e} \\ & & \text{if } \underline{e} \text{ then } \underline{e} \text{ else } \underline{e} \mid \text{if } \underline{e} \text{ then } \underline{e} \text{ else } \underline{e} \mid \text{if } \underline{e} \text{ then } \underline{e} \text{ else } \underline{e} \\ & & (\underline{e}, e) \mid (e, \underline{e}) \mid \pi_1 \underline{e} \mid \pi_2 \underline{e} \\ & & (\underline{e})_{\star} \\ & & (\lambda x : \underline{\tau}. \underline{e})_{\star} \mid (\lambda x : \tau. \underline{e})_{\star} \mid (\lambda x : \underline{\tau}. \underline{e})_{\star}^{\rightarrow} \mid (\lambda x : \tau. \underline{e})_{\star}^{\rightarrow} \mid (\underline{e})_{\star}^{\rightarrow} \underline{e} \mid (\underline{e})_{\star}^{\rightarrow} \underline{e} \\ & & (\text{if } \underline{e} \text{ then } \underline{e} \text{ else } \underline{e})_{\eta} \mid (\text{if } \underline{e} \text{ then } \underline{e} \text{ else } \underline{e})_{\eta} \mid (\text{if } \underline{e} \text{ then } \underline{e} \text{ else } \underline{e})_{\eta} \\ & & ((\underline{e}, \underline{e}))_{\star}^{\rightarrow} \mid ((\underline{e}, \underline{e}))_{\star}^{\rightarrow} \mid \pi_1 (\underline{e})_{\star}^{\rightarrow} \mid \pi_2 (\underline{e})_{\star}^{\rightarrow} \end{array}$$

(\pi_2 \check{e})^\square &= \pi_2 (\check{e}^\square) \\
(\pi_2 (\check{e})_{\rightarrow}^\square)^\square &= \pi_2 \check{e}^\square \\
(\check{e})_{\vdash}^\square &= \check{e}^\square
\end{aligned}$$

F.5 Metatheorems

Theorem F.1 (Erasure Commutativity). *For all \check{e} , $(\check{e}^\square)^\circ = (\check{e}^\circ)^\square$.*

$$\begin{array}{ccc}
\check{e} \in \text{ZMExp} & \xrightarrow{\square} & \underline{e} \in \text{ZExp} \\
\downarrow \circ & & \downarrow \circ \\
\check{e} \in \text{MExp} & \xrightarrow{\square} & e \in \text{UExp}
\end{array}$$

Theorem F.2 (Correctness).

1. If \check{e} WF and $\Gamma \vdash_{\text{M}} \check{e}^\circ \Rightarrow \tau$ and $\Gamma \vdash \check{e} \Rightarrow \tau \xrightarrow{\alpha} \check{e}' \Rightarrow \tau'$ and $\check{e}^\square \xrightarrow{\alpha} e'$, then $\check{e}'^\square = e'$.
2. If \check{e} WF and $\Gamma \vdash_{\text{M}} \check{e}^\circ \Leftarrow \tau$ and $\Gamma \vdash \check{e} \xrightarrow{\alpha} \check{e}' \Leftarrow \tau$ and $\check{e}^\square \xrightarrow{\alpha} e'$, then $\check{e}'^\square = e'$.

Theorem F.3 (Sensibility).

1. If \check{e} WF and $\Gamma \vdash_{\text{M}} \check{e}^\circ \Rightarrow \tau$ and $\Gamma \vdash \check{e} \Rightarrow \tau \xrightarrow{\alpha} \check{e}' \Rightarrow \tau'$, then \check{e}' WF and $\Gamma \vdash_{\text{M}} \check{e}'^\circ \Rightarrow \tau'$.

2. If \underline{e} WF and $\Gamma \vdash_{\text{M}} \underline{e}^\circ \Leftarrow \tau$ and $\Gamma \vdash \underline{e} \xrightarrow{\alpha} \underline{e}' \Leftarrow \tau$, then \underline{e}' WF and $\Gamma \vdash \underline{e}'^\circ \Leftarrow \tau$.

Theorem F.4 (Movement Erasure Invariance).

1. If $\underline{\tau} \xrightarrow{\text{move } \delta} \underline{\tau}'$, then $\underline{\tau}^\circ = \underline{\tau}'^\circ$.
2. If \underline{e} WF and $\Gamma \vdash_{\text{M}} \underline{e}^\circ \Rightarrow \tau$ and $\Gamma \vdash \underline{e} \xrightarrow{\text{move } \delta} \underline{e}' \Rightarrow \tau'$, then \underline{e}' WF and $\underline{e}^\circ = \underline{e}'^\circ$ and $\tau = \tau'$.
3. If \underline{e} WF and $\Gamma \vdash_{\text{M}} \underline{e}^\circ \Leftarrow \tau$ and $\Gamma \vdash \underline{e} \xrightarrow{\text{move } \delta} \underline{e}' \Leftarrow \tau$, then \underline{e}' WF and $\underline{e}^\circ = \underline{e}'^\circ$.

Theorem F.5 (Reachability).

1. If $\underline{\tau}^\circ = \underline{\tau}'^\circ$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\underline{\tau} \xrightarrow{\bar{\alpha}} \underline{\tau}'$.
2. If \underline{e} WF and \underline{e}' WF and $\Gamma \vdash_{\text{M}} \underline{e}^\circ \Rightarrow \tau$ and $\underline{e}^\circ = \underline{e}'^\circ$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\Gamma \vdash \underline{e} \Rightarrow \tau \xrightarrow{\bar{\alpha}} \underline{e}' \Rightarrow \tau$.
3. If \underline{e} WF and \underline{e}' WF and $\Gamma \vdash_{\text{M}} \underline{e}^\circ \Leftarrow \tau$ and $\underline{e}^\circ = \underline{e}'^\circ$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\Gamma \vdash \underline{e} \xrightarrow{\bar{\alpha}} \underline{e}' \Leftarrow \tau$.

Lemma F.5.1 (Reach Up).

1. If $\underline{\tau}^\circ = \tau$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\underline{\tau} \xrightarrow{\bar{\alpha}} \triangleright \tau \triangleleft$.
2. If \underline{e} WF and $\Gamma \vdash_{\text{M}} \underline{e}^\circ \Rightarrow \tau$ and $\underline{e}^\circ = \underline{e}$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\Gamma \vdash \underline{e} \Rightarrow \tau \xrightarrow{\bar{\alpha}} \triangleright \underline{e} \triangleleft \Rightarrow \tau$.
3. If \underline{e} WF and $\Gamma \vdash_{\text{M}} \underline{e}^\circ \Leftarrow \tau$ and $\underline{e}^\circ = \underline{e}$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\Gamma \vdash \underline{e} \xrightarrow{\bar{\alpha}} \triangleright \underline{e} \triangleleft \Leftarrow \tau$.

Lemma F.5.2 (Reach Down).

1. If $\underline{\tau}^\circ = \tau$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\triangleright \tau \triangleleft \xrightarrow{\bar{\alpha}} \underline{\tau}$.
2. If \underline{e} WF and $\Gamma \vdash_{\text{M}} \underline{e}^\circ \Rightarrow \tau$ and $\underline{e}^\circ = \underline{e}$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\Gamma \vdash \triangleright \underline{e} \triangleleft \Rightarrow \tau \xrightarrow{\bar{\alpha}} \underline{e} \Rightarrow \tau$.
3. If \underline{e} WF and $\Gamma \vdash_{\text{M}} \underline{e}^\circ \Leftarrow \tau$ and $\underline{e}^\circ = \underline{e}$, then there exists $\bar{\alpha}$ such that $\bar{\alpha}$ movements and $\Gamma \vdash \triangleright \underline{e} \triangleleft \xrightarrow{\bar{\alpha}} \underline{e} \Leftarrow \tau$.

Theorem F.6 (Constructability).

1. For every τ , there exists $\bar{\alpha}$ such that $\triangleright ? \triangleleft \xrightarrow{\bar{\alpha}} \triangleright \tau \triangleleft$.
2. If $\Gamma \vdash_{\text{M}} \underline{e} \Rightarrow \tau$, then there exists $\bar{\alpha}$ such that $\Gamma \vdash \triangleright (\parallel) \triangleleft \Rightarrow ? \xrightarrow{\bar{\alpha}} \triangleright \underline{e} \triangleleft \Rightarrow \tau$.
3. If $\Gamma \vdash_{\text{M}} \underline{e} \Leftarrow \tau$, then there exists $\bar{\alpha}$ such that $\Gamma \vdash \triangleright (\parallel) \triangleleft \xrightarrow{\bar{\alpha}} \triangleright \underline{e} \triangleleft \Leftarrow \tau$.

Theorem F.7 (Determinism).

1. If $\underline{\tau} \xrightarrow{\alpha} \underline{\tau}'$ and $\underline{\tau} \xrightarrow{\alpha} \underline{\tau}''$ then $\underline{\tau}' = \underline{\tau}''$.
2. If \underline{e} WF and $\Gamma \vdash_{\text{M}} \underline{e}^\circ \Rightarrow \tau$ and $\Gamma \vdash \underline{e} \Rightarrow \tau \xrightarrow{\alpha} \underline{e}' \Rightarrow \tau'$ and $\Gamma \vdash \underline{e} \Rightarrow \tau \xrightarrow{\alpha} \underline{e}'' \Rightarrow \tau''$, then $\underline{e}' = \underline{e}''$ and $\tau' = \tau''$.
3. If \underline{e} WF and $\Gamma \vdash_{\text{M}} \underline{e}^\circ \Leftarrow \tau$ and $\Gamma \vdash \underline{e} \xrightarrow{\alpha} \underline{e}' \Leftarrow \tau$ and $\Gamma \vdash \underline{e} \xrightarrow{\alpha} \underline{e}'' \Leftarrow \tau$, then $\underline{e}' = \underline{e}''$.

G Constraint generation

Here, we give the list of constraint-generating bidirectional typing rules under the marked lambda calculus for type hole inference, described in Section 4 of the paper.

MECHANIZATION \times

$\tau \blacktriangleright_{\rightarrow} \tau_1 \rightarrow \tau_2 \mid C$ τ has matched arrow type $\tau_1 \rightarrow \tau_2$ and generates constraints C

TMAHOLE-C

$$\frac{}{\tau^p \blacktriangleright_{\rightarrow} ?^{\rightarrow_L(p)} \rightarrow ?^{\rightarrow_R(p)} \mid \{ \tau^p \approx ?^{\rightarrow_L(p)} \rightarrow ?^{\rightarrow_R(p)} \}}$$

TMAARR-C

$$\frac{}{\tau_1 \rightarrow \tau_2 \blacktriangleright_{\rightarrow} \tau_1 \rightarrow \tau_2 \mid \{ \}}$$

$\tau \blacktriangleright_{\times} \tau_1 \times \tau_2 \mid C$ τ has matched binary product type $\tau_1 \times \tau_2$ and generates constraints C

TMPHOLE-C

$$\frac{}{\tau^p \blacktriangleright_{\times} ? \times ? \mid \{ \tau^p \approx ?^{\times_L(p)} \times ?^{\times_R(p)} \}}$$

TMPPROD-C

$$\frac{}{\tau_1 \times \tau_2 \blacktriangleright_{\times} \tau_1 \times \tau_2 \mid \{ \}}$$

$\Gamma \vdash \check{e} \Rightarrow \tau \mid C$ \check{e} synthesizes type τ and generates constraints C

MSEHOLE-C

$$\frac{}{\Gamma \vdash (\parallel)^u \Rightarrow ?^{exp(u)} \mid \{ ?^{exp(u)} \approx \text{etc} \}}$$

MSVAR-C

$$\frac{x : \tau \in \Gamma}{\Gamma \vdash x \Rightarrow \tau \mid \{ \}}$$

MSFREE-C

$$\frac{x \notin \text{dom}(\Gamma)}{\Gamma \vdash (\parallel x \parallel)_{\square}^u \Rightarrow ?^{exp(u)} \mid \{ ?^{exp(u)} \approx \text{etc} \}}$$

MSLAM-C

$$\frac{\Gamma, x : \tau \vdash \check{e} \Rightarrow \tau_2 \mid C}{\Gamma \vdash \lambda x : \tau_1. \check{e} \Rightarrow \tau_1 \rightarrow \tau_2 \mid C}$$

MSAP1-C

$$\frac{\Gamma \vdash \check{e}_1 \Rightarrow \tau \mid C_1 \quad \tau \blacktriangleright_{\rightarrow} \tau_1 \rightarrow \tau_2 \mid C_2 \quad \Gamma \vdash \check{e}_2 \Leftarrow \tau_1 \mid C_3}{\Gamma \vdash \check{e}_1 \check{e}_2 \Rightarrow \tau_2 \mid C_1 \cup C_2 \cup C_3}$$

MSAP2-C

$$\frac{\Gamma \vdash \check{e}_1 \Rightarrow \tau \mid C_1 \quad \tau \blacktriangleright_{\rightarrow} \quad \Gamma \vdash \check{e}_2 \Leftarrow ?^{\rightarrow_L(exp(u))} \mid C_2}{\Gamma \vdash (\check{e}_1)_{\rightarrow}^u \check{e}_2 \Rightarrow ?^{\rightarrow_R(exp(u))} \mid C_1 \cup C_2 \cup \{ ?^{exp(u)} \approx ?^{\rightarrow_L(exp(u))} \rightarrow ?^{\rightarrow_R(exp(u))} \}}$$

MSNUM-C

$$\frac{}{\Gamma \vdash \underline{n} \Rightarrow \text{num} \mid \{ \}}$$

MSPLUS-C

$$\frac{\Gamma \vdash \check{e}_1 \Leftarrow \text{num} \mid C_1 \quad \Gamma \vdash \check{e}_2 \Leftarrow \text{num} \mid C_2}{\Gamma \vdash \check{e}_1 + \check{e}_2 \Rightarrow \text{num} \mid C_1 \cup C_2}$$

MSTRUE-C

$$\frac{}{\Gamma \vdash \text{tt} \Rightarrow \text{bool} \mid \{ \}}$$

MSFALSE-C

$$\frac{}{\Gamma \vdash \text{ff} \Rightarrow \text{bool} \mid \{ \}}$$

MSIF-C
